

**AMENDMENTS TO THE SPECIFICATION**

***In the Specification:***

Please replace the paragraph beginning on page 11, line 15 with the following amended paragraph:

For example, if the received incoming message is a call, the ~~call~~ base alarm information may include identifications (e.g., mobile communication terminal number) of the calling mobile communication terminal 10 and the called mobile communication terminal 90. On the other hand, if the received incoming message is a short message, the base alarm information may include identifications of the calling/called mobile communication terminals 10 and 90 and optionally a content of the short message. The base alarm information may include more information not described in this specification since the incoming message in this specification is not simply limited to the call and the short message.
